

How Do EV Chargers Stay Connected Underground?

- Limited cellular coverage
- Costly fiber installation
- Chargers depend on a reliable platform connection

EV Charging Platform
Wired Data Connection
Internet
4G LTE
Wireless Data Connection
Built-in Antennas
IP65
PoE
ODU302
4G Industrial Outdoor Router
PoE / Data Connection
ES220
4G at the Entrance
Ethernet to the Chargers
ODU302 provides the 4G LTE uplink. ES220 connects the chargers over Ethernet.

Simpler to Deploy
Easier to Manage

4G LTE
reduces the need for long fiber runs

Dual-SIM
failover adds link resilience

Device Manager
enables remote monitoring and maintenance
